

Practices in Agile Architecture Governance: Multiple Case Studies in Large Organizations

Niklas Reiter, Master's Thesis – Kick-Off Presentation, 06.08.2018

Chair of Software Engineering for Business Information Systems (sebis)
Faculty of Informatics
Technische Universität München

Research Roadmap

Motivation – Large Scale Agile Development

Agile methods were originally designed
for working at team level

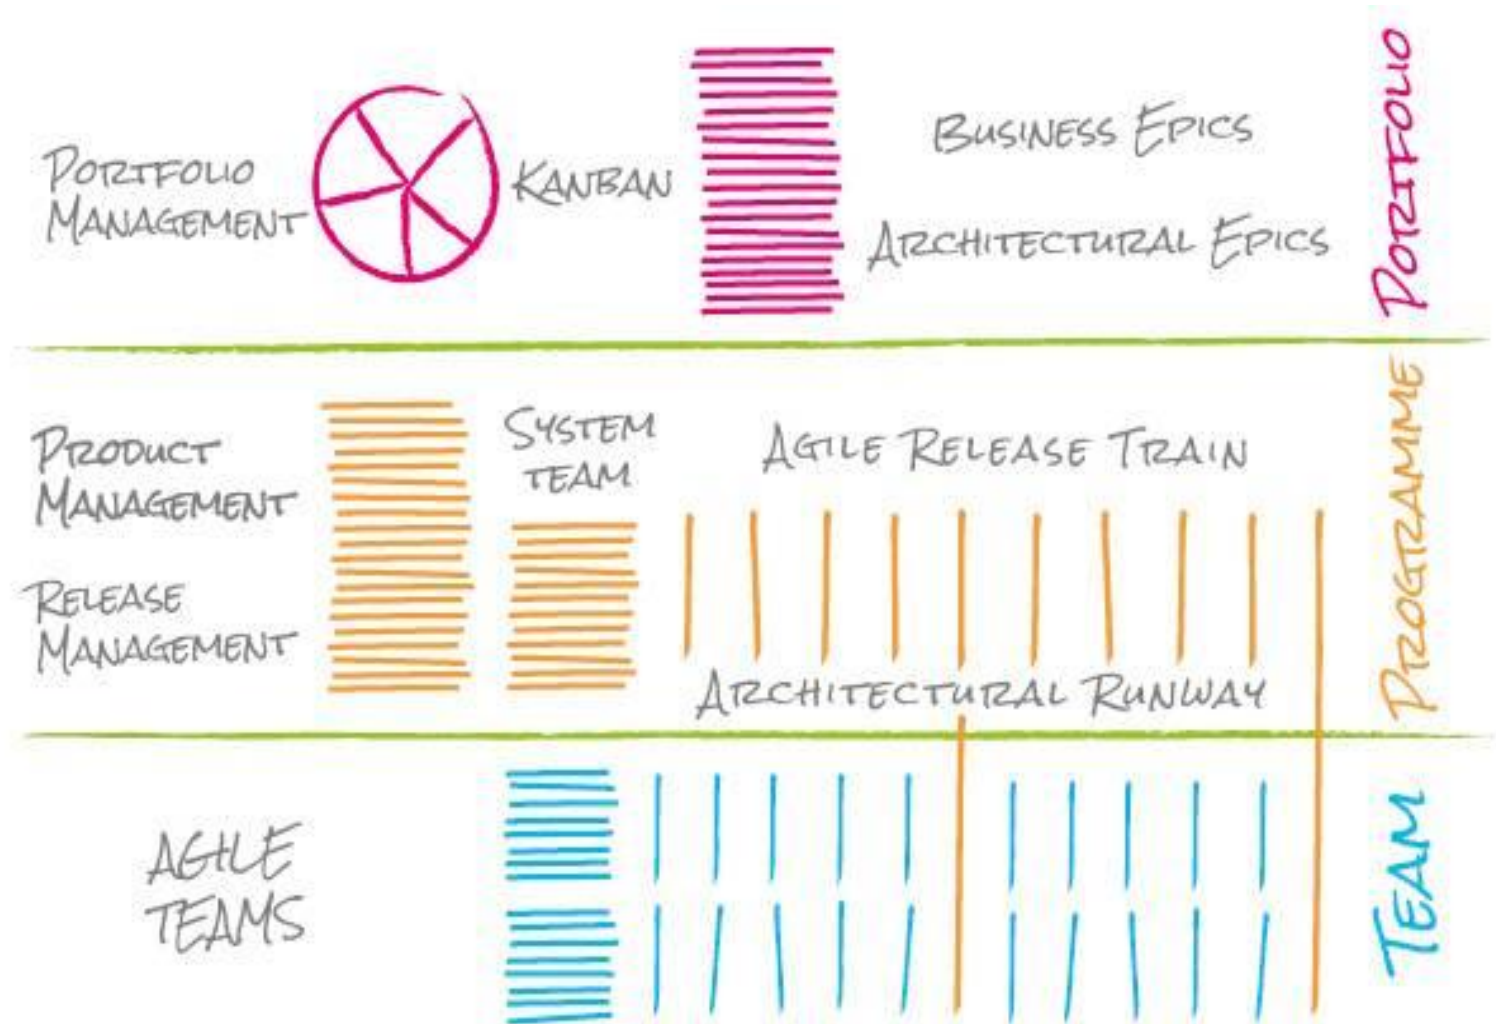

Do not provide sufficient guidance on program and
portfolio level, especially in terms of governance

To coordinate work and to develop reliable and scalable
systems companies need to have a suitable governance
and the right architectural planning

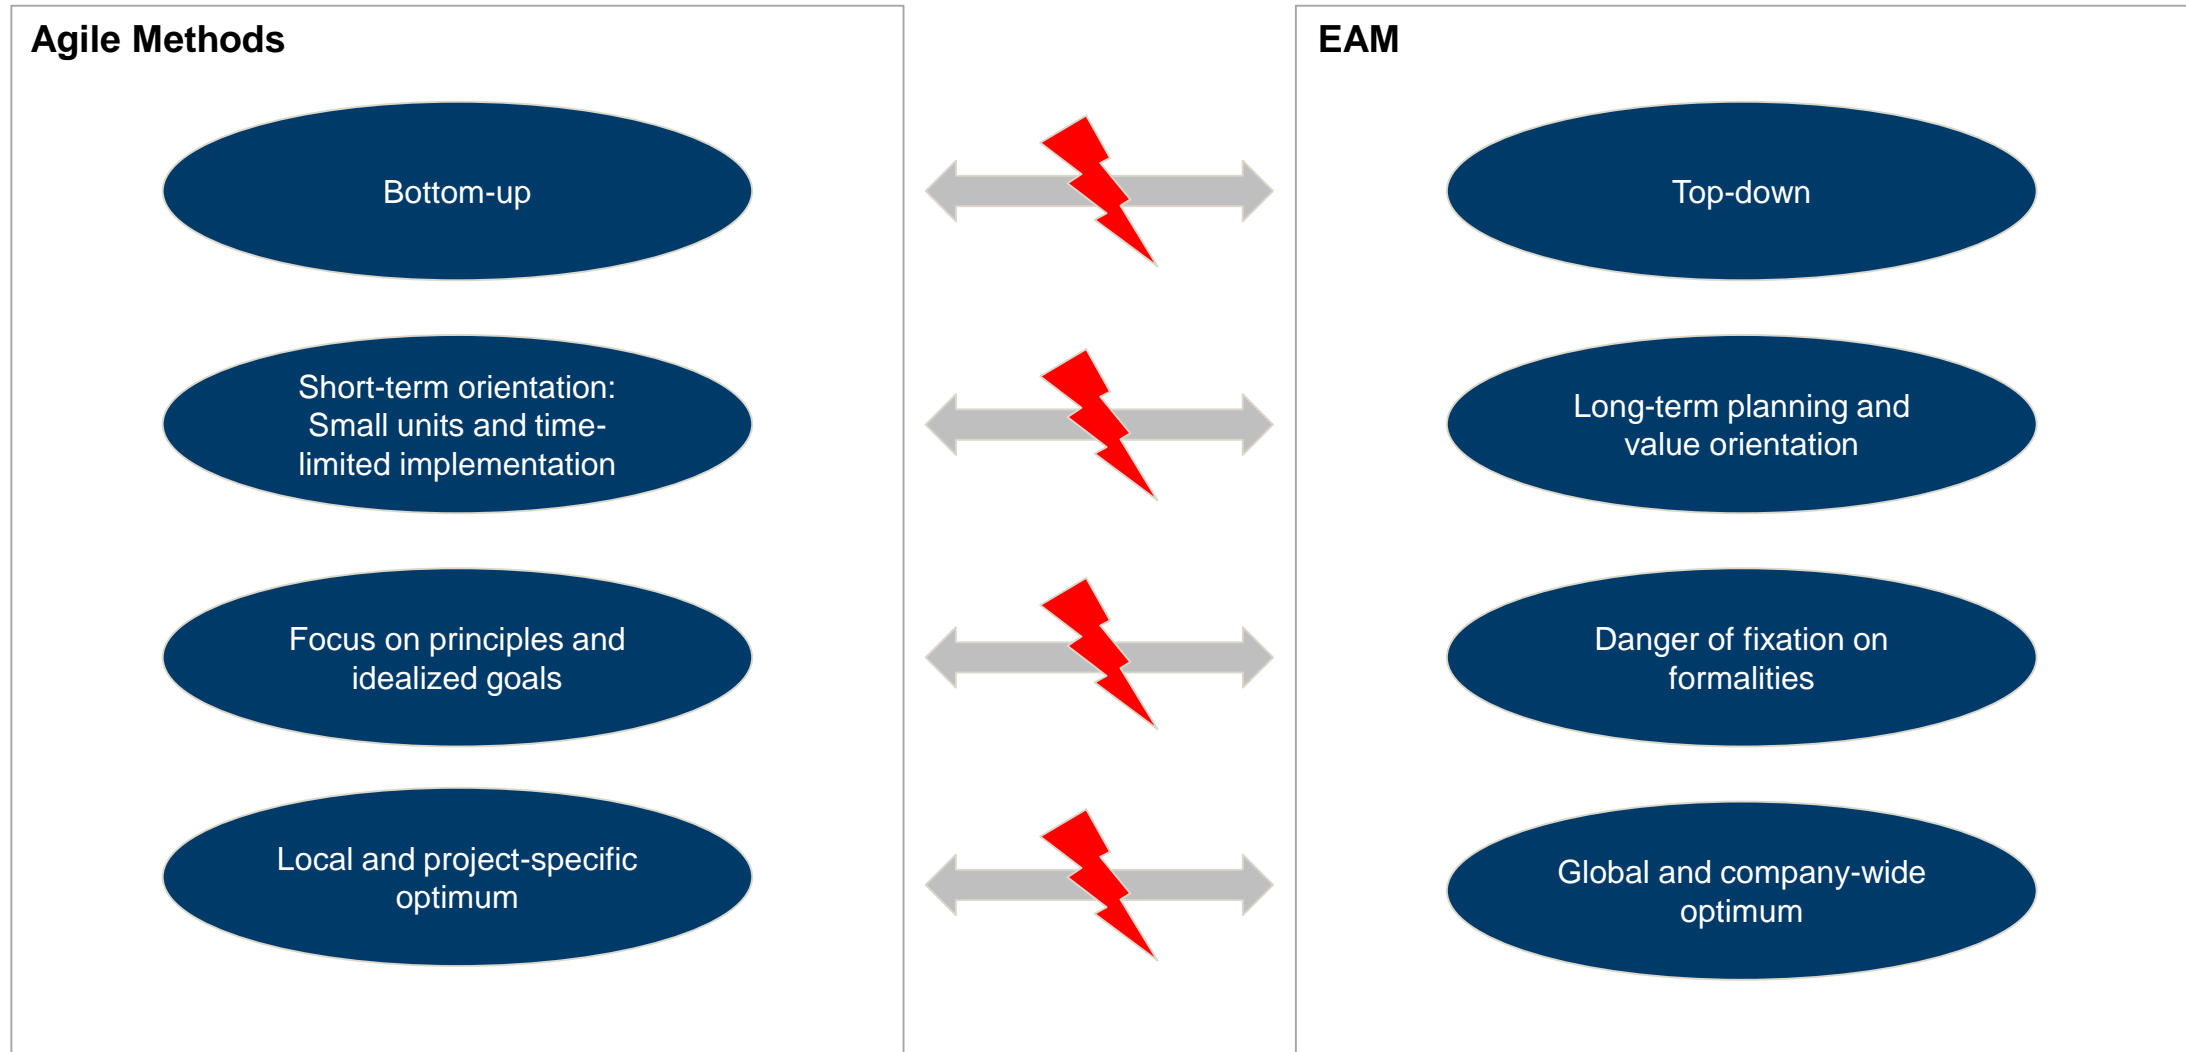

Find balance between agile development and
architectural governance

Motivation - Agile Methods and EAM are in Conflict

Source: Hauder, Roth, Schulz, & Matthes, 2014; Hanschke, Ernsting, & Kuchen, 2015, S. 4101; Bente, Bombosch, & Langade, 2012, S. 159, 162 f.; Hanschke et al., 2015, S. 4101

Motivation – Governance vs. Autonomy

1. Data Collection

- Literature review
- Provide a list with new findings in an agile context
- Gather data via semi-structured group interviews

2. Data Analysis

- Analyze and codify interviews using MAXQDA
- Identify patterns and challenges within large scale agile development

The image displays four overlapping questionnaire forms from the Technical University of Munich (TUM). Each form is titled 'Fragebogen – Governance im agilen Umfeld' followed by a specific sub-topic: 'Architekturprinzipien', 'Rolle des EA Teams', 'Architekturcommunities', and 'Wertbeitrag des EAM'. The forms are designed for data collection in an agile development context. They include sections for general information (Name, Position, Department), role-related questions (e.g., '1. Allgemeine Fragen zu Ihrer Rolle'), and specific governance topics (e.g., '2. Ermöglichung'). The forms are presented in a layered manner, showing different parts of each questionnaire.

Research Roadmap

- **Abrahamson et al.: “Agility and Architecture”**
 - The role of software architects is getting more and more complex
 - Architecture should emerge gradually sprint after sprint as a result of successive small refactoring
 - A healthy focus on architecture isn’t contradictory to any agile process
 - Satoshi Basaki: “It seems that many agile method users misunderstand what agile methods are, just ignore architecture, and jump onto refactoring”
- **Andreas Slogar: “The Agile Organization”**
 - Companies face enormous challenges through innovations, digitization, increasing complexity and speed of change
 - Requires new approaches, rethink the enterprise structure
- **Hauder, M., Roth, S., Schulz, C., & Matthes, F.: “Agile enterprise architecture management: an analysis on the application of agile principles”**
 - Agile principles and values are increasingly adopted by organizations but there is little known whether these practices have already made their way into EA management
 - Similarities between software development - centering rather on single systems - and EA management - focusing on the holistic management of systems of systems
 - Changing requirements while ensuring a close collaboration among stakeholders must be handled
 - No contribution was found that investigated on the current status quo of agile practices in industry
- **Nord et al.: “Agile in Distress: Architecture to the Rescue”**
 - A Big design up front (BDUF) is causing problems due to changing requirements during the development
 - “Agile teams naively hope that a suitable architecture will gradually emerge out of weekly refactorings”
 - Agile teams want to be autonomous and self-responsible in their decisions
 - Agile methods currently only work in the “sweet spot”: small teams of 5-12 working with small to medium-sized systems with simple architectures

How can EAM support large scale agile development?

Current State – Embedded Multiple Case Studies

- Semi-structured group interview for each unit of analysis
- Each group consists at best of 2-3 people
- Stakeholder groups:
 1. Enterprise Architects (EA)
 2. Agile Teams (AT)
 3. Management (M)

Status	BMW	DATEV	MEDIA-SATURN	VKB
EA	75%	50%	0%	0%
AT	0%	0%	0%	0%
M	0%	0%	0%	0%
TOTAL	25%	0%	0%	0%

Example for BMW:

ID	Type	Topic	Role	Duration	Group	Done
I1	Semi-structured Interview	Architecture Principles	EA	41 mins	1	yes
I2	Semi-structured Interview	Architecture Boards	EA	58 mins	1	yes
I3	Semi-structured Interview	Role of EA-Team	EA	37 mins	1	yes
I4	Semi-structured Interview	Proof of Efficiency	EA	52 mins	1	yes
...
